

Oluwashijibomi Owolabi Jeremiah

Research-Oriented in Scalable Distributed Systems & Dependable Analytics

oluwashijibomiaseni@gmail.com • +234 708 193 6853 • My GitHub Profile • My LinkedIn Profile

Profile

Final year Computer Science student with research-oriented interests in distributed systems, cloud computing, and system security. Experienced in system deployment, networking, and applied problem-solving through academic and industry projects. Seeking MSc level research training with a focus on scalable and dependable systems

Education

09/2022 – Present
Ibadan, Nigeria

Bachelor of Science (B.Sc.) | Computer Science
Lead City University
CGPA: 4.24/5.00

Professional Experience

04/2025 – 10/2025
Ibadan, Nigeria

IT Intern
Graphic Packaging International

- Analyzed system behavior patterns for threat detection
- Investigated a malware incident by analyzing system behavior and user activity patterns, and led staff workshops on data privacy and basic cybersecurity practices.
- Delivered IT support for staff and vendors, troubleshooting hardware, software, and network issues.
- Gained hands-on networking experience with Cisco Packet Tracer and real device configuration.
- Designed and launched a localized website for GPI Nigeria, aligning with global branding.
- Improved network response time by 15% after implementing optimized network configurations

Workshops & Presentations
Data Privacy & Cybersecurity Seminars: Led training sessions for employees at Graphic Packaging International

Topics covered: Secure data handling, phishing prevention, compliance basics, and best practices for workplace cybersecurity.

Skills

Cybersecurity & Data Privacy ● ● ● ● ●
Threat Analysis, Server Security, Data Protection Practices

Programming Languages ● ● ● ● ●
Python, C++, JavaScript, HTML/CSS

Frameworks & Libraries: ● ● ● ● ●
Flask, React, PyTorch, Scikit-learn, Sentence-BERT, FAISS, NumPy, Pandas

Tools & Platforms ● ● ● ● ●
Git, GitHub, Docker, Render, Linux, Cisco Packet Tracer

Databases ● ● ● ● ●
MySQL, Supabase

Interests

Research Interests

- Scalable architectures for AI-integrated applications
- Reliable distributed and cloud-based systems
- Performance optimization in educational platforms
- Secure data handling in digital learning environments

Projects

04/2026 – 05/2026

PhishGuard - ML-Powered Phishing Detection Platform [↗](#)

- Built a full-stack phishing detection web application using Flask (backend) and React/TypeScript (frontend), deployed on Render.
- Trained and integrated four ML models: Logistic Regression, Random Forest, Neural Network, and SVM, for URL threat classification.
- Engineered feature extraction pipeline processing URL structure, domain age, and lexical patterns for real-time inference.
- Optimized backend for low-latency predictions on live user submissions.

08/2025 – 08/2025

Graphic Packaging International Localized Website [↗](#)

- Designed and launched a localized website for Graphic Packaging International Nigeria during internship, aligned with global brand guidelines.

05/2026 – 05/2026

Food Delivery Website (MealDash) [↗](#)

- Built and deployed a responsive food ordering web application for real clients, live on Render.

03/2026 – 04/2026

Departmental Learning Platform (LECTURE-LINK) [↗](#)

- Architected and built a full-stack learning platform for a university CS department using Flask, MySQL, and React.
- Integrated a Retrieval-Augmented Generation (RAG) chatbot powered by Sentence-BERT and FAISS for semantic search across academic resources.
- Implemented role-based access control, content management, and an AI assistant for student query resolution.
- Evaluated using DeLone and McLean IS Success Model, TAM, and Cognitive Load Theory.

05/2026 – 05/2026

K-Core Graph Decomposition Tool [↗](#)

- Implemented k-core decomposition from scratch in C++ without external libraries, reading graphs from edge list files.
- Computes core numbers for all nodes and reports graph degeneracy, directly applying concepts from published research on dynamic graph maintenance.
